Experience Summary

- Working as Server Administrator and Devops Engineer in **Absolin Software Solutions LLP .**
- Having 2 Years of IT experience as Server Administrator which includes working with Node.js frameworks such as Express Js, building RESTful APIs, working with databases (such as **MongoDB**), and implementing authentication and authorization using libraries like JSON Web Token (JWT) and Passport.Js .
- Worked on Development and deployment using **Express.js**, **Git**, **GitHub**, and **Docker**.
- Skilled in Docker, Git, GitHub, Shell Scripting, **AWS (EC2 , S3)**
- Having good knowledge and implemented Projects using AGILE Methodologies. Self-Learning attitude, Sense of Responsibility and Dynamic Team Player

Skills

- **Programming** : Node Js
- **Tools** : Postman, npm, MsOffice
- **Containerization** : Docker
- **Version control tools** : Git, GitHub, GitLab
- **CI/CD** : Jenkins, GitLab, GitHub Actions
- **Scripting** : Shell Scripting
- **Web Servers** : Nginx, Apache Tomcat
- **Cloud Technologies** : AWS (EC2, S3)
- **Networking** : TCP/IP, SCP, LAN/WAN,DNS, HTTP, FTP, SSH
- **Operating Systems** : Windows XP/7/8/10/11, Unix/Linux
- **Database** : Mongodb
- **Environment** : Expressjs, ejs, Micro services, MVC

Achievements, Labs & Certification

- Advent of Cyber in 2020 from TryHackMe Academy, won a Raspberry Pi 400 as part of the Advent of Cyber challenge
- CEH (Certified Ethical Hacking) certification in 2021 from OneByteLabs
- Advent of Cyber 3 in 2021 from TryHackMe Academy
- Advent of Cyber 2023 from TryHackMe Academy
- TryHackMe cyber security certifications achieved in 2021-2023, including :
  - Web Fundamentals , Introduction to Cyber Security, Jr. Penetration Tester, Pre Security, Cyber Defense, Complete Beginner, Offensive Pentesting, CompTIA Pentest+ certification .

Education

- I completed a B.Sc. in Computer Science (MPCS) from Adarsh Degree College, Andhra University, graduating in 2021.
- I successfully completed the MPC (Mathematics, Physics, Chemistry) course in intermediate at Sri Chaitanya Junior College

Projects

Project #1 : Shopify E-commerce

Title : ***Moovkart***

Description : This Shopify e-commerce site is your go-to destination for essential hospital products. It offers a user-friendly online platform where healthcare professionals and patients can easily find and purchase medical equipment, PPE, pharmaceuticals, and more, all from the convenience of their homes. It's your one-stop shop for all your hospital product needs.

Client : Moovkart

Period : March 2023 to Dec 2023

Roles & Responsibilities :

- Conducted extensive research to gather updated and accurate information on a wide range of hospital products.
- Updated product descriptions, ensuring they were clear, informative, and optimized for SEO to improve search engine rankings.
- Enhanced product images to create visually appealing and informative listings, contributing to increased customer engagement.

Project #2 : Verification process

Title : ***Report Automation***

Description : The DataFlow Group is a pioneering global provider of specialized Primary Source Verification (PSV) solutions, and background screening and immigration compliance services that assist public and private organizations in mitigating risks to make informed, cost-effective decisions regarding their applicants and registrants. They are partners with clients across the public and private sectors to assist them in mitigating potential risks by exposing fraudulent education degrees, job histories, practice licenses, work permits and passports, among other personal or professional documents.

Client : DataFlow

Period : June 2022 to Feb 2023

Roles & Responsibilities :

- Deploying Java application JAR code on Linux servers, setting up environments for JAR and WAR applications using technologies such as Git, Apache Tomcat Server, and Shell Scripting
- Creating a shell script to automate the scheduling of jobs and cleanup activities.

Project #3 : RCE vulnerability

Title : ***Ultr0nctf***

Description : This CTF (Capture the Flag) challenge focuses on Remote Code Execution (RCE) vulnerabilities within a containerized environment and incorporates the use of Docker containerization and Nginx reverse proxy. Participants will engage in practical tasks and puzzles designed to enhance their understanding of RCE vulnerabilities and their exploitation. By simulating real-world scenarios, participants will gain hands-on experience in identifying and mitigating RCE vulnerabilities in Docker containers while also learning about the role of Nginx reverse proxy in securing applications.

Client : TryHackMe

Period : Feb 2022 to May 2022

Roles & Responsibilities :

- Developing build deployment using Nginx reverse proxy, Node.js, Docker, and an application while setting up the environment for automation processes. Fully handling build and deployment using Git and Docker.
- Set up Node.js and Dockerize the application using a Dockerfile for containerization.
- Utilize Nginx as a reverse proxy to handle incoming requests and forward them to the backend server.
- Automate the build and deployment process using Git integration and CI/CD tools like Jenkins or GitHub Actions.
